Disclaimers and Cautionary Statements

This interview may contain forward-looking information within the meaning of applicable securities laws. All information and statements other than statements of current or historical facts contained in this interview are forward-looking information. Such statements and information may be identified by words such as “about”, “approximately”, “may”, “believes”, “expects”, “will”, “intends”, “should”, “plans”, “predicts”, “potential”, “projects”, “anticipates”, “estimates”, “continues”, or similar words or the negative thereof or other comparable terminology. Forward-looking statements are subject to various risks and uncertainties concerning the specific factors disclosed here and elsewhere in GoviEx’s periodic filings with Canadian securities regulators. Information provided in this interview is necessarily summarized and may not contain all available material information.

Forward-looking statements include, without limitation, statements regarding the expected timing and ability of GoviEx to advance its mine-permitted projects to production; the expected declining supply in the uranium market over the next five to ten years, due to anticipated decline in production from existing producers whose uranium mines are nearing end of life, or who are forced to reduce production until the uranium price increases; the expected acquisition of uranium from the spot market by existing producers to cover their long-term contractual obligations; the expected recovery of the market price of uranium, and anticipated direct and indirect effects of an increasing uranium market price on GoviEx’s share price, and its ability to advance its mine-permitted projects towards production and generate cash flow into the current improving uranium market cycle; the anticipated ability for GoviEx to further optimize its mine-permitted projects; and GoviEx’s anticipated ability to secure the debt financing required to advance GoviEx’s mine-permitted projects towards mine construction.

Forward-looking statements are based on a number of assumptions and estimates that, while considered reasonable by management based on the business and markets in which GoviEx operates, are inherently subject to significant operational, economic, and competitive uncertainties and contingencies. Forward-looking statements are based on the reasonable assumptions, estimates, analysis, and opinions of management made in light of its experience and its perception of trends, current conditions, and expected developments, as well as other factors that management believes to be relevant and reasonable in the circumstances at the date that such statements are made, but which may prove to be incorrect. Management believes that the assumptions and expectations reflected in such forward-looking statements are reasonable. Assumptions upon which forward-looking statements have been made in this interview include that: (i) GoviEx will not encounter any financial, legal, regulatory, political, environmental, technical, or other obstacles that will materially impede its ability to successfully pursue its planned exploration and development activities and business plans; (ii) the price of uranium will increase sufficiently and the costs of advancing GoviEx’s mining projects will remain sufficiently low so as to permit GoviEx to implement its business plans in a viable manner; (iii) GoviEx will be able to obtain the requisite financing to advance the Company’s projects towards mine construction; and (iv) GoviEx’s will be able to have a Feasibility Study completed on its Madaouela Project in Niger. Factors that could cause actual results to differ materially from expectations include: (i) the failure of GoviEx’s projects, for technical, logistical, labour-relations, regulatory, or other reasons; (ii) a decrease in the price of uranium below what is necessary to sustain GoviEx’s operations; (iii) an increase in GoviEx’s operating costs above what is feasible to sustain its operations; (iv) accidents, labour disputes, political instability, or the materialization of similar risks; (v) a deterioration in capital market conditions that prevents GoviEx from raising the funds it requires on a timely basis; and (vi) generally, GoviEx’s inability to develop and implement a successful business plan for any reason. In addition, the factors described or referred to in the section entitled “Financial Risks and Management Objectives” in the MD&A for GoviEx for the year-ended December 31, 2017, available at www.sedar.com, should be reviewed in conjunction with the information found in this interview.

Although GoviEx has attempted to identify important factors that could cause actual results, performance, or achievements to differ materially from those contained in the forward-looking statements, there can be other factors that cause results, performance, or achievements not to be as anticipated, estimated, or intended. There can be no assurance that such information will prove to be accurate or that management's expectations or estimates of future developments, circumstances, or results will materialize. As a result of these risks and uncertainties, the results or events predicted in these forward-looking statements may differ materially from actual results or events. Accordingly, readers should not place undue reliance on forward-looking statements. The forward-looking statements in this interview are made as of the date of this interview, and GoviEx disclaims any intention or obligation to update or revise such information, except as required by applicable law. Certain scientific, technical and economic information disclosed in this interview related to GoviEx’s assets are derived from the following technical reports, which may be found on GoviEx’s website at www.goviex.com:

• “NI 43-101 Technical Report on a Preliminary Economic Assessment of the Mutanga Uranium Project in Zambia”, dated November 30, 2017 (the “PEA”). The PEA is considered preliminary in nature and includes Inferred Mineral Resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as Mineral Reserves. Mineral Resources that are not Mineral Reserves have not yet demonstrated economic viability. Due to the uncertainty that may be attached to Inferred Mineral Resources, it cannot be assumed that all or any part of an Inferred Mineral Resource will be upgraded to an Indicated or Measured Mineral Resource as a result of continued exploration or Mineral Reserves once economic considerations are applied; therefore, there is no certainty that the production profile concluded in the PEA will be realized.

Qualified Person: All scientific and technical information disclosed in this interview is derived from GoviEx’s continuous disclosure documents that have been reviewed and approved by Dr. Rob Bowell, a Chartered Chemist of the Royal Society of Chemistry, a Chartered Geologist of the Geological Society of London, and Fellow of the Institute of Mining, Metallurgy and Materials, who is an independent Qualified Person under the terms of NI 43-101. Dr. Bowell has verified the data disclosed in this interview.

Cautionary Note to United States Investors: This interview and the disclosure contained herein does not constitute an offer to sell or the solicitation of an offer to buy securities of GoviEx Uranium Inc.
